

EDULOAN AI ASSISTANT

EduLoan AI Assistant

EduLoan AI Assistant is an AI-powered workflow automation system built using n8n to simplify the education loan application process for students.

The automation begins when a student submits their details and uploaded documents through a Google Form. The workflow is automatically triggered and retrieves the submitted information from Google Sheets.

The system then performs document verification by comparing the uploaded documents against a predefined list of mandatory documents required for an education loan application, such as:

- Aadhaar Card
- PAN Card
- Admission Letter
- Fee Structure
- Income Certificate
- Passport Photo
- Bank Passbook

After verification, the automation identifies any missing documents and determines the application's status as either **Complete** or **Incomplete**.

Based on the verification result, the system automatically:

1. Generates a personalized application status report.
2. Sends an email notification to the student containing the application status and details of any missing documents.
3. Updates a centralized dashboard in Google Sheets, allowing applications to be monitored and tracked in real time.

The automation eliminates repetitive manual verification tasks, reduces paperwork errors, and provides students with immediate feedback regarding their education loan applications.

Workflow Summary

Student submits form

Google Sheets Trigger

Document Verification Engine

Identify Missing Documents

Send Automated Email Notification

Update Dashboard

Key Features

- Automated document verification
- Missing document detection
- Real-time email notifications
- Centralized dashboard tracking
- Reduced manual intervention
- Faster and more efficient application processing

The EduLoan AI Assistant demonstrates how workflow automation and AI can be leveraged to streamline administrative processes and improve the overall experience of students applying for education loans.
